

THE CONTROL PAD

Tips, Tricks, and more

- On/Off: Press and hold 
- Tap  button
- USB Charger: Hold **SET** and **+** for 3 seconds
- Increase/Decrease Pedal Assist: Press **+/-**
- **PAS**: Pedal Assist

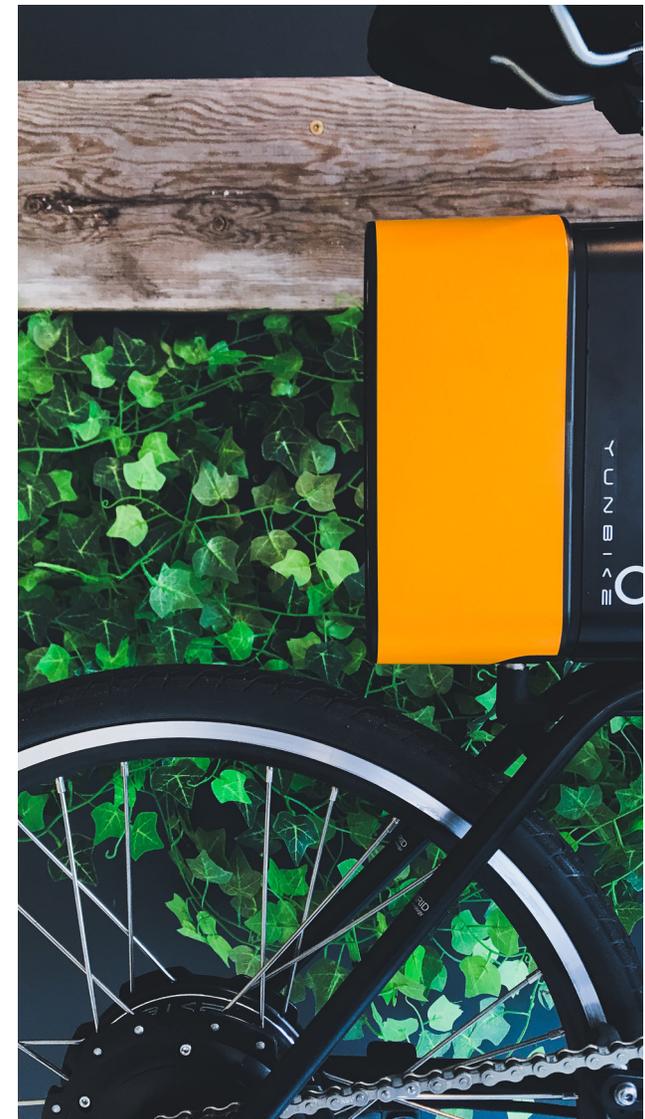

CHARGING

- Plug into a wall outlet
- Light on charger is red when battery is low
- Light on the charger will turn green when the battery is fully charged
- Time to fully charge battery: about 3 hours
- When green, the charger will change to trickle in order to protect the battery

RANGE

- Higher levels of pedal assist reduce range of bike
- Range average are 15-40 miles depending on throttle usage

A Guide To Your

ELECTRIC BICYCLE

PEDAL ASSIST

- Pedal assist only provides power while you are pedaling
- Start on 0 and gradually increase from 0 to 5 as you gain confidence with it
- An initial power delay is normal. The delay is a result of the computer calculating ride speed
- As a result of this delay we emphasize the use of caution when turning and dismounting from your bike
- We recommend that you turn the bike OFF when walking with it
- The motor *will* engage if the pedals are bumped accidentally
- The bikes have a sensor in their brake line so when the brakes are engaged power will cut to the motor

BATTERY TIPS

- The sun can damage your battery so do not leave your battery in direct sunlight for long periods of time
- Do not leave your battery in the freezing cold for many months if not being used
- Do not leave your battery discharged for long periods of time, keep it fully charged

MAINTENANCE

- Clean your bike weekly. Remove any dirt, debris, sand, or mud
- Clean gently. Don't use aggressive water sprays or power jets
- Keep the battery dry
- Store your eBike somewhere dry and out of direct sunlight
- After cleaning lubricate chains and cables
- Keep tires inflated properly. This helps to avoid flat tires and increases your efficiency while riding

HELPFUL RIDING TIPS

- Always wear a helmet
- Wear bright, reflective material while riding so other riders and drivers can see you day or night
- Make sure to always use your bell, lights and mirrors
- Ride defensively. Always be on the lookout for cars, other bikers, dogs, and pedestrians.
- Always signal when turning
- Be on the lookout for potholes and cracks in the road
- Always ride with traffic, not against
- Always be aware of your surroundings
